

# BAD IDEA #18214

## INSTALLATION

Turn off your modular system before installing BAD IDEA #18214. Be sure that the red stripe on your ribbon cable aligns with the "-12v RED STRIPE!" silkscreen on the PCB. Double check that you have correctly connected your ribbon cable to the power distribution board before turning unit on. Improper installation or use could cause damage to you and your surroundings.

## WHAT DID I JUST BUY?

BAD IDEA #18214 is an 8 channel cable converter with switchable attenuators for each channel. The attenuators drop the signal from eurorack level to line level to allow integration with audio mixers, interfaces, guitar pedals, and patch bays. With the attenuators switched off, the module can be used as a bidirectional cable converter. If going from line level back to eurorack from a 1/4" cable, amplification will be required from an external source.

## BYPASS JUMPER MAPPING:

- |              |              |
|--------------|--------------|
| Jack 1 - J11 | Jack 5 - J12 |
| Jack 2 - J13 | Jack 6 - J14 |
| Jack 3 - J15 | Jack 7 - J16 |
| Jack 4 - J17 | Jack 8 - J18 |
